

Supply Chain Explorer: Assembly and packaging

This is an export from the Emerging Technology Observatory **Supply Chain Explorer** (<https://chipexplorer.eto.tech>). You can see the web version of this content at <https://chipexplorer.eto.tech/?filter-choose=input-resource&input-resource=N69>.

Assembly and packaging

At the end of the fabrication process, the finished wafer contains dozens of chips in a grid pattern. During assembly and packaging, the wafer is separated into individual chips, or "dies". Each chip is mounted on a frame with wires that connect the chip to external devices, and enclosed in a protective casing. This produces the familiar look of a dark gray rectangle with metal pins at the edges.
